

**AMENDMENT OF ABSTRACT**

**ABSTRACT**

~~The invention provides a~~ A disposable cover for a shopping cart that has a handle and a child's seat, where the cover covers the handle and a restraint railing on the child's seat. ~~having a horizontal bar (e.g. handle) and a child's seat, wherein the horizontal bar is adjacent and offset by a space from restraint railing of the child's seat. The restraint railing is typically the framework that is proximal to the front / leg hole of a child's seat.~~ The disposable shopping cart cover is a flexible planar sheet of a sanitary polymeric film having a reverse printed back side and a front side, and a pressure sensitive adhesive coating on the back side of the sheet. The cover can be adhered and stretched taut across the space between the handle ~~horizontal bar~~ and the restraint railing, providing a sanitary protective covering over the handle ~~horizontal bar~~ and the restraint railing ~~of the child's seat~~. The adhered planar sheet ~~spanning the space~~ provides an activity center for a child. The adhesive coating is used to adhere the covering either directly to the handle bar and the restraint railing, or to loop around the handle bar and ~~/or railing and~~ attach with the adhesive coating face-to-face.
